Chest auscultation revealed equal bilateral breath sounds. Mechanical ventilation was initiated with tidal volume = 600 ml and 12 breaths/min. Sevoflurane was started at 2.5% on the vaporizer. Thirty minutes after induction of anesthesia, and 10 min after the surgery had begun, the end-tidal carbon dioxide was 35 mmHg; end-tidal

##### The bottom line Asthma is a  
condition characterised clinically by

## Get Free Auscultation Of Breath Sounds Cd Rom For Windows

recurrent episodes of wheeze, cough, and breathlessness, and physiologically by variable airflow obstruction. Airway inflammation is sometimes added to the definition, but it is rarely measured in clinical practice; some groups would consider episodic viral wheeze in preschool children as a separate condition.
