Solution Set Math Example

In mathematics, a solution set is the set of values that satisfy a given set of equations or inequalities.. For example, for a set $\{x\}$ of polynomials over a ring, the solution set is the subset of x on which the polynomials all vanish (evaluate to 0), formally $\{x \in R : \forall p \in S, p(x) = 0\}$. The feasible region of a constrained optimization problem is the solution set of the constraints

Also, you might have noticed that $x = 3$ is not the only solution to $(x^2 - 9 = 0)$. In this case $x = -3$ is also a solution. We call the complete set of all solutions the solution set for the equation or inequality. There is also some formal notation for solution sets although we won't be using it all that often in this course.

Solution Set Definition The solution set for an equation is the set of all numbers that when used in the place of the variable makes the equation a true statement. For example, the equation $x - 6 = 4$ has a solution 10. When $x = 10$, the equation becomes the true statement. **Solution Sets for Equations** The set containing all the solutions of an equation is called the solution set for that equation.

Example 1 Write the solution set of the equation $x^2 + x - 2 = 0$ in roster form. Solving the given equation $x^2 + x - 2 = 0$
 $x^2 + 2x - x - 2 = 0$
 $x(x + 2) - 1(x + 2) = 0$
 $(x - 1)(x + 2) = 0$
 $x = 1$ or $x = -2$
Solution set = $\{1, -2\}$

Purplemath. You never know when set notation is going to pop up. Usually, you'll see it when you learn about solving inequalities, because for some reason saying " $x < 3$ " isn't good enough, so instead they'll want you to phrase the answer as "the solution set is $\{ x \mid x \text{ is a real number and } x < 3 \}$ ". How this adds anything to the student's understanding, I don't know.

Set Builder Notation is very useful for defining domains. In its simplest form the domain is the set of all the values that go into a function. The function must work for all values we give it, so it is up to us to make sure we get the domain correct!

In mathematics, a constraint is a condition of an optimization problem that the solution must satisfy. There are several types of constraints—primarily equality constraints, inequality constraints, and integer constraints. The set of candidate solutions that satisfy all constraints is called the feasible set.
